

Group 1: Gabe, Megan, Andrew (Linear)

Project Title: Spanning Sets, Basis, and the Gram-Schmidt Process

Length of Presentation: 20–30 minutes

Submission Format: PDF report (typed in LaTeX) and slides (any format), both to be uploaded to Moodle

Audience: Your classmates and instructor

Goal: To create a clear, concise, and polished presentation that helps peers understand and recall key concepts from this unit.

Project Overview

Your group will design and present a mini-lecture on the topics of Spanning Sets, Bases, and the Gram-Schmidt Process. This includes related vector space concepts such as null spaces, column spaces, and orthogonality in $\mathbb{R}^n$.

The project should:

- Be structured clearly and logically
- Include concise explanations and diagrams where helpful
- Demonstrate understanding through meaningful examples
- Avoid overloading slides with too much text

In addition to the presentation, your group will submit a written report (in LaTeX, exported to PDF) summarizing the main ideas, definitions, and examples from your talk. This document should serve as a study resource for your classmates.

Grading Criteria

Criteria	Points	Details
Content Accuracy	30	Definitions and examples are mathematically correct and appropriate
Clarity of Explanations	25	Clear, concise, logical flow with student-friendly language
Visuals and Slide Design	15	Slides are clean, readable, include helpful diagrams and aren't overcrowded
Team Collaboration	10	All members contribute and appear informed
Presentation Delivery	20	Engaging, well-paced, and within time limit
TOTAL	100
